Projects

Tradebot – Financial Assistant [[Github](#)] [[Live Demo](#)]

Stack: Java, Spring Boot, PostgreSQL, Docker, Telegram Bot API, REST

A Telegram bot designed to provide real-time financial data and personalized tools for traders and investors.

Responsibilities & Features:

- Integrated external APIs to fetch live market data
- Designed using SOLID principles and layered architecture
- Deployed on Heroku and publicly available for everyone interested in financial markets

Personal Portfolio Website [[Github](#)] [[Live Demo](#)]

Stack: HTML5, CSS3, Javascript

A personal portfolio site built from scratch to showcase my background, projects, and technical skills as a Java Software Developer.

Sigment Chat – Encrypted Tor-Based Messenger [[Github](#)] [In Development]

Stack: Spring Boot, HTML5/CSS3, Javascript, React, WebSockets

A privacy-focused chat application that ensures anonymous, secure communication over the Tor network.

Responsibilities & Features:

- Designed and implemented UI components for login, registration, and dashboard
